Scalability & Future Plan

Date	25 October 2026
Team ID	Individual
Project Name	EV Market Analysis
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Dashboards use a static dataset with no live data refresh	Insights become outdated as new EV sales data arrives	High
2	Heavy charts (scatter, map) with many manufacturers	Slower loading and cluttered visuals with larger data	Medium
3	No role-based access or user-level views	All viewers see the same data and filters	Low

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Single user on Tableau Desktop	Publish to Tableau Cloud / Server to support many concurrent viewers
2	Data Storage	Local data file / extract	Move data to a cloud database (e.g., SQL, BigQuery) with scheduled refresh
3	Performance	Works well on current data size	Use extracts, data aggregation and fewer filters to keep dashboards fast
4	Security	No access restrictions	Add row-level security and role-based access on the server

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact

Phase 2	Live data refresh from a cloud database	1-2 months	Always up-to-date insights
Phase 3	Publish dashboards online with role-based access	3-4 months	Wider access for stakeholders
Phase 4	Add predictive analytics (sales forecasting)	5-6 months	Better planning decisions
